

slidedeck-pdf.js

An easy way to get your Keynote Slidedeck and
Speakernotes online

And down here are the speakernotes.
Keynote renders them in the PDF.

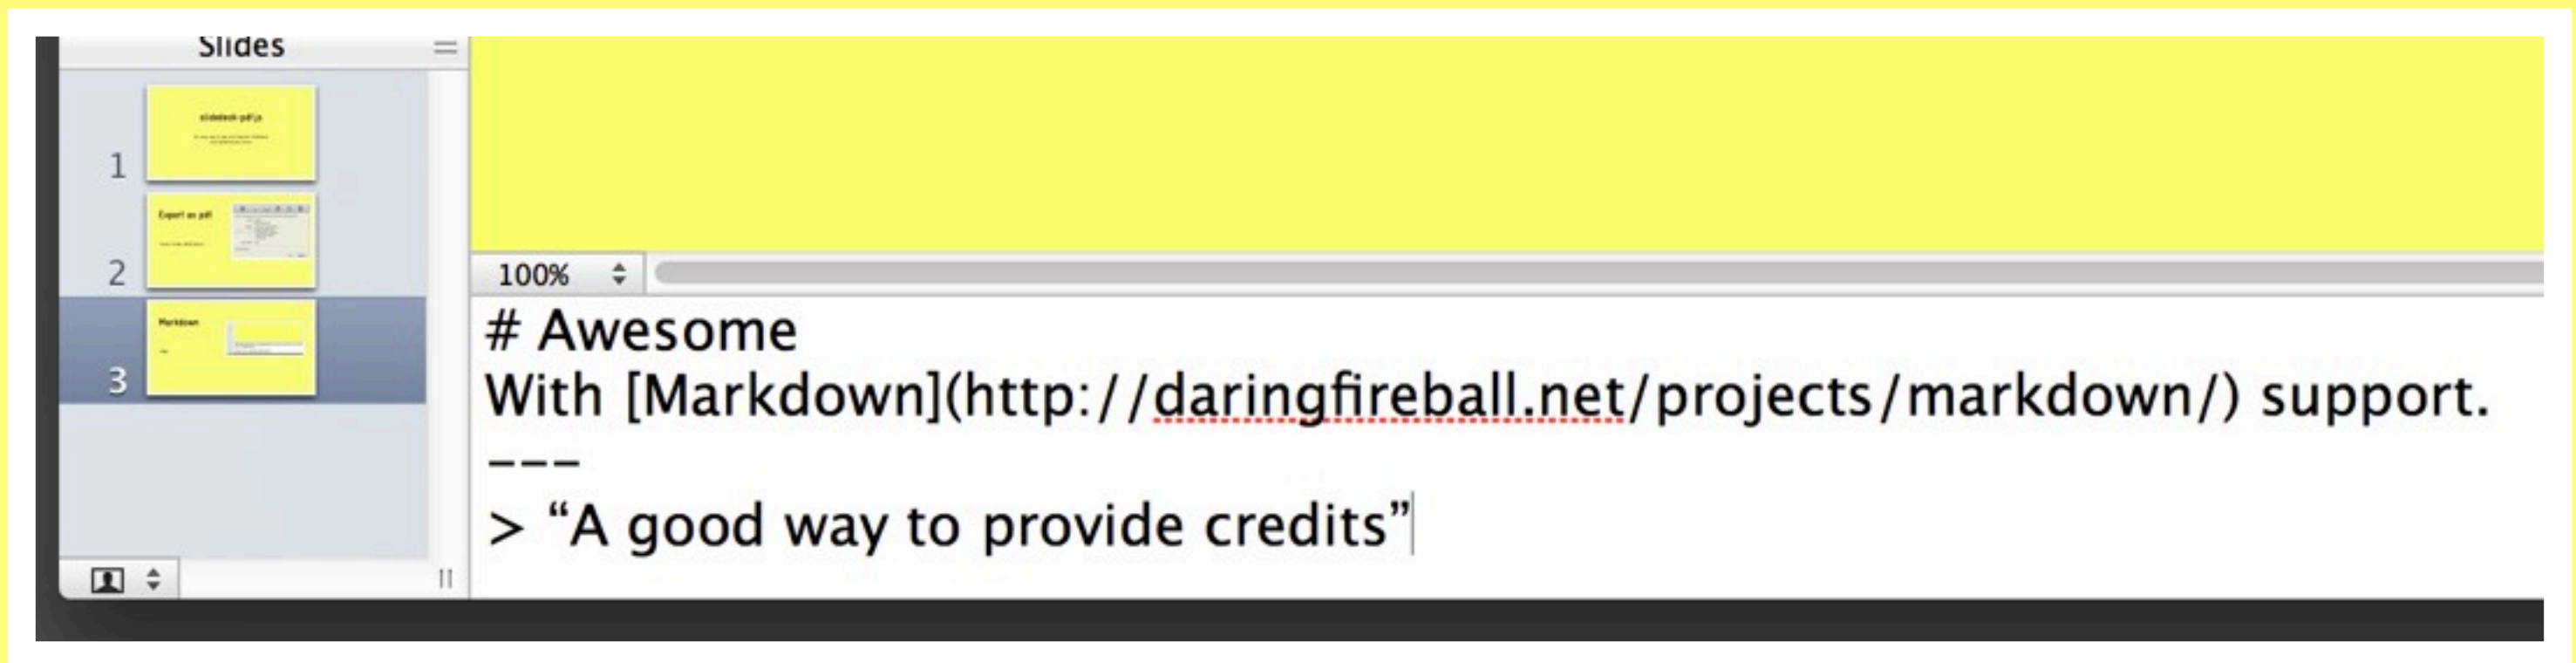

Export as pdf.

Check "Slides With Notes"

And SlidedeckPdfJs will extract your notes and display them as HTML-Element.

Markdown

Awesome

With [Markdown](http://daringfireball.net/projects/markdown/) support.

> "A good way to provide credits"

Speaking of Credits

slidedeck-pdf.js is an experimental javascript speedproject,
a proof of concept.

Think of it as glue between exiting great projects:
pdf.js, markdown-js, History.js, jquery

Thinking further

Sure!

- There should be links on the slides
- An animation between slides
- Loading Indication
- UI-Elements to Navigate between slides
- Improved rendering (as seen in pdf.js viewer code)
